

Scam Investigation Methodology

Synthetic demonstration knowledge-base document for ScamHunter AI RAG testing.

Step 1: Preserve

Save the original message, URL, sender details, screenshots, attachments, timestamps, and payment instructions.

Step 2: Classify

Identify the apparent scenario: phishing, shopping, job, investment, impersonation, payment, or another pattern.

Step 3: Corroborate

Compare claims against independent sources and the internal knowledge base.

Step 4: Contradictions

Record evidence that conflicts with the claim. Do not hide uncertainty.

Step 5: Decide next verification step

The investigation should end with practical verification actions rather than an unsupported accusation.
