

Banking and Payment Scam Patterns

Synthetic demonstration knowledge-base document for ScamHunter AI RAG testing.

Payment instructions

Unexpected changes to payment instructions should be independently verified, especially for business invoices or large transfers.

One-time codes

Never share a one-time authentication code merely because someone claims to be support staff. Use an official support channel to verify.

Account takeover

Unexpected password-reset notices or device-login alerts can indicate attempted account takeover. Navigate directly to the official service rather than using message links.
