

Safe Verification and Evidence Collection Guide

Synthetic demonstration knowledge-base document for ScamHunter AI RAG testing.

Independent channel

If a message claims to be from an organization, contact that organization using a website or contact method obtained independently.

Do not escalate exposure

Avoid clicking unknown links, sending additional credentials, or forwarding sensitive documents merely to investigate.

Evidence quality

Prefer primary or independently verified sources. Treat copied social posts and anonymous claims as lower-confidence until corroborated.

Uncertainty

A lack of evidence does not prove safety. Record what was checked, what remains unknown, and what would resolve the uncertainty.
